【译】Safe Research with Document Blocks

Alice Zhang; Bob Li

Laboratory of Reproducible Research

【译】Abstract

【译】This synthetic paper evaluates block translation. It contains protected inline mathematics $\alpha + \beta = \gamma$, references [1], and images.

【译】1 Introduction

【译】Block translation should preserve evidence and reading order. The original document is retained. We examine reproducible analysis and scientific reasoning in two columns. The method uses paragraph-level evidence and a stable document identity. A useful value is $x_i^2 + y_i^2$ and we compare results with [1–2]. No real model is used in this fixture.

【译】1.1 Method

【译】The numbered equation is retained as vector content.

$$E = mc^2 \tag{1}$$

【译】Figure 1: A vector method overview.

【译】2 Results

【译】 · Keep source evidence.

【译】 · Review translated blocks.

【译】Reliable evaluation requires repeated experiments. We use twenty observations and preserve mathematical symbols σ^2 in the translated prose. The results support the method.

【译】Reliable evaluation requires repeated experiments. We use twenty observations and preserve mathematical symbols σ^2 in the translated prose. The results support the method.

【译】Reliable evaluation requires repeated experiments. We use twenty observations and method.

【译】preserve mathematical symbols σ^2 in the translated prose. The results support the method.
